World oil prices vaulted Monday to fresh multi-year pinnacles on strong demand and tight supplies, fuelling inflation worries and weighing on most European stock markets.

Article Source: Fin24

HEADLINE CPI: The CPI calculates the cost to purchase a fixed basket of goods as a way of determining how much inflation is occurring in the broad economy. The CPI uses a base year and indexes current year prices based on the base year's values.

CORE CPI: The headline figure is not adjusted for seasonality or for the often volatile elements of food and energy prices, which are removed in the Core CPI.
