MARKET REPORT

When it comes to finance, 'normal' data is actually pretty weird

One of the most common assumptions in data analysis is that the numbers will follow a normal distribution – a central concept in statistics often known as the bell curve. If you've ever looked at a chart of people's heights, you've seen this curve: Most people cluster near the middle, with fewer at the extremes. It's symmetrical and predictable, and it's often taken for granted in research.

HEADLINE CPI: The CPI calculates the cost to purchase a fixed basket of goods as a way of determining how much inflation is occurring in the broad economy. The CPI uses a base year and indexes current year prices based on the base year's values.

CORE CPI: The headline figure is not adjusted for seasonality or for the often volatile elements of food and energy prices, which are removed in the Core CPI.
